CONCRETE CREATIONS By BOMANITE CONTRACTORS

IMPRESSIONS | APRIL | 2010

Bomanite Custom Polishing Systems, paired with our long-established color and craftsmanship, delivers the industry's best concrete floor finishes. One application, equals permanent results. Available in finishes from satin to gloss, Bomanite Custom Polishing Systems offer exceptional resistance to slipping, abrasion and impact on top of being environmentally-friendly and low-maintenance. Requiring no replacement, recoating or waxing, Bomanite Custom Polishing Systems produce a beautiful, lustrous finish that will complement any style of décor.

PROJECT PROFILE

Autodesk AEC Headquarters

Bomanite Custom Polishing Systems: Patène Teres

Bomanite Custom Polishing Systems are affordable alternatives to expensive custom flooring treatments. Their sustainability, durability, energy efficiencies and low maintenance make choosing a custom polished concrete floor an easy choice.

Fast becoming the "must have" finishing solution for LEED® certified projects, polished concrete has found an enthusiastic audience of contractors and specifiers who are increasingly including such floors into the building plans of countless restaurants, schools, retail stores, auto showrooms and Corporate offices such as the Autodesk AEC Headquarters located in Waltham, Massachusetts.

Autodesk, certified LEED® Platinum by the U.S. Green Building Council, began as an existing shell building erected by developers, Tocci Building Corporation. Tocci was the selected General Contractor for the project. Working together with designer, KlingStubbins, Bomanite polished concrete, Patène Teres, was chosen as the sustainable flooring option to meet the needs of the fast-track schedule. Certified and trained Bomanite contractor, Premier Concrete Construction, LLC worked throughout the evenings to color and polish 13,000 square feet of concrete on three levels, along the way repairing and patching numerous small cracks and divots to provide that perfect smooth polished floor in the time frame allowed. Bomanite Water-based Concrete Dyes were chosen as the coloring method for their low VOC content and brilliant color hues. To achieve a custom look, Black Orchid Dye was mixed with Thistle Green Dye for the main floor and Red Berry Dye was utilized for the two dining rooms on the upper floor.

There are a variety of custom finishes to choose from in the Bomanite Custom Polishing Systems collection. Whether you are looking for the timeless look of terrazzo, brilliant color or long-lasting protection for newly designed or existing surfaces, Bomanite has the perfect floor treatment for you. Patène Teres by Bomanite™ utilizes a unique, topically applied coloration system to create a one-of-a-kind floor, Patène Teres offers versatility and permanent results. With lustrous color protected by a tight, beautiful sheen, the patented technology of Bomanite Custom Polishing Systems, paired with our long established color and craftsmanship, steps out into the forefront delivering the industry's best concrete floor finish.

While the polish chemically reacts with the concrete to lock in the color, the mechanical application closes the surface to keep out contaminants. Finished surfaces also repel water and oil and are dust-proof. Bomanite Custom Polishing Systems offer exceptional resistance to slipping, abrasion and impact. The non-toxic, non-flammable, odorless application is environmentally friendly and does not require replacement, recoating or waxing providing a low maintenance floor finish that is durable, purposeful and attractive.

Bomanite Custom Polishing Systems are available exclusively by Bomanite Licensed Contractors trained and certified to install these systems. To find out more information about sustainable Bomanite polished concrete floors or to locate a licensed contractor, visit www.bomanite.com/polishing

PROJECT STATISTICS

Project Name:
Autodesk AEC Headquarters

Project Type: Corporate Office
