## TARGET FIELD

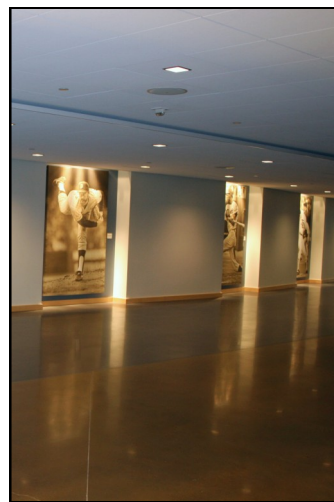

MN Twins Stadium Incorporates  
Polished Concrete

The Legends Club Level of Target Field showcases Minnesota's rich history of Twin Hall of Famers and the Met Club. Architects wanted a flooring option that could feature an artistic design that helped accent larger-than-life art pieces of Kirby Puckett,

Harmon Killebrew, Rod Carew, and other historic Twins ballplayers. One of the many benefits to polished concrete is its ability to reflect light which aids in featuring these Hall of Famers.

Concrete Arts and Bulach Custom Rock teamed up for the big undertaking of Polishing the Legends Club. With over 28,000 square feet of level 2 Vitra Floor polished concrete, Legends Club Level displays a design of custom Bomanite colored dyes, Blueberry and Maple Syrup. A Blueberry path leads the way from one entrance to the other with 3 different dilution levels of Maple Syrup strips.

Polished concrete not only allows for design flexibility, but more importantly provides functionality. As one of the highest trafficked areas, Polished Concrete was chosen because of its durability and low maintenance. Over time, this flooring option will hold up better and cost less than any other flooring option.

**Project:**  
Polished Concrete

**Location:**  
Target Field  
Minneapolis, MN

**Problem:**  
Finding a flooring surface that incorporates design and strength.

**Solution:**  
Provide polished concrete for interior, high traffic areas.

**Results:**  
A beautiful floor that complements the rich history Target Fields showcases. The flooring provides a warm feel and artistic design.
